Hacking and Penetration Testing with Low Power Devices Philip Polstra

Hacking and Penetration Testing with Low Power Devices shows you how to perform penetration tests using small, low-powered devices that are easily hidden and may be battery-powered. It shows how to use an army of devices, costing less than you might spend on a laptop, from distances of a mile or more.

Hacking and Penetration Testing with Low Power Devices shows how to use devices running a version of The Deck, a full-featured penetration testing and forensics Linux distribution, and can run for days or weeks on batteries due to their low power consumption. Author Philip Polstra shows how to use various configurations, including a device the size of a deck of cards that can easily be attached to the back of a computer.

While each device running The Deck is a full-featured pen-testing platform, connecting systems together via 802.15.3 networking gives you even more power and flexibility. This reference teaches you how to construct and power these devices, install operating systems, and fill out your toolbox of small low-power devices with hundreds of tools and scripts from the book's companion website. *Hacking and Pen Testing with Low Power Devices* puts all these tools into your hands and will help keep you at the top of your game performing cutting-edge pen tests from anywhere in the world!

- Understand how to plan and execute an effective penetration test using an army of low-power devices
- Learn how to configure and use open-source tools and easy-to-construct low-power devices
- Leverage IEEE 802.15.4 networking to perform penetration tests from up to a mile away, or use 802.15.4 gateways to perform pen tests from anywhere in the world
- Access penetration testing operating systems with hundreds of tools and scripts on the book's companion web site

It means that, science book or encyclopedia or others. So , how do you think about this book?

Marina Tijerina:

In this 21st millennium, people become competitive in every way. By being competitive currently, people have do something to make all of them survives, being in the middle of the crowded place and notice by surrounding. One thing that sometimes many people have underestimated it for a while is reading. That's why, by reading a guide your ability to survive boost then having chance to stay than other is high. For yourself who want to start reading any book, we give you that Hacking and Penetration Testing with Low Power Devices book as beginner and daily reading reserve. Why, because this book is usually more than just a book.

Tony Jacobson:

Is it an individual who having spare time in that case spend it whole day by watching television programs or just laying on the bed? Do you need something totally new? This Hacking and Penetration Testing with Low Power Devices can be the respond to, oh how comes? The new book you know. You are and so out of date, spending your free time by reading in this new era is common not a nerd activity. So what these books have than the others?

Yong Dickerson:

As a college student exactly feel bored to help reading. If their teacher questioned them to go to the library or to make summary for some publication, they are complained. Just minor students that has reading's heart and soul or real their interest. They just do what the professor want, like asked to go to the library. They go to there but nothing reading seriously. Any students feel that reading is not important, boring and can't see colorful photos on there. Yeah, it is being complicated. Book is very important for yourself. As we know that on this period, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. Therefore , this Hacking and Penetration Testing with Low Power Devices can make you feel more interested to read.
