Ray Gorham

On a Friday afternoon before Labor Day, Americans are getting ready for the holiday weekend, completely unaware of a long-planned terrorist plot about to be launched against the country. Kyle Tait is settling in for his flight home to Montana when a single nuclear bomb is detonated 300 miles above the heart of America. The blast, an Electro-Magnetic Pulse (EMP), destroys every electrical device in the country, and results in the crippling of the power grid, the shutting down of modern communications, and bringing to a halt most forms of transportation. Kyle narrowly escapes when his airplane crashes on take-off, only to find himself stranded 2,000 miles from home in a country that has been forced, from a technological standpoint, back to the 19th Century. Confused, hurt, scared, and alone, Kyle must make his way across a hostile continent to a family he's not even sure has survived the effects of the attack. As Kyle forges his way home, his frightened family faces their own struggles for survival in a community trying to halt its slow spiral into chaos and anarchy. *77 Days in September* follows Kyle and his wife, Jennifer, as they are stretched past their breaking point, but find in their devotion to each other the strength to persevere. WHAT IS AN EMP? An EMP (Electro-Magnetic Pulse) is a magnetic pulse that overwhelms, and thus destroys, all electronic devices exposed to it. It is the most serious threat faced by a technologically advanced society. An EMP can be human caused, through the detonation of a nuclear bomb high above the atmosphere, or natural, through a severe geo-magnetic storm. In multiple reports prepared for Congress, scientists predict the complete destruction of modern American society and question our ability to ever recover if we are the target of an EMP attack. Further, some predict the death toll in America in the aftermath of such an event to be in excess of 200 million.
