Spinal Cord Regeneration

U.S. House of Representatives

Spinal Cord Regeneration U.S. House of Representatives

Being paralyzed is a very frightening idea, in many ways more so than death. I cannot imagine having to basically relearn some of the most elemental functions that we take for granted and having to be dependent on others for even such simple things as brushing one's teeth. This is particularly true in a world where there are still so many physical and psychological barriers for the handicapped. Spinal cord regeneration is the hope of the future for those who have been or will be paralyzed. Approximately 90 percent of all spinal cord injuries occur to those between the ages of 16 and 30, just when they see the wonderful possibilities ahead. Currently, spinal cord nerve cells do not regenerate or repair themselves. Once damage has been done, it is permanent. If research into spinal cord regeneration succeeds, so much would be saved in terms of human suffering, dollars and productivity. Even if it is only partially successful, many wheelchairs would not be needed again. The possibilities that come to mind are endless.
